

“Our turnaround time has been great and efficient. Setting the patient up with the mobile app and device is a very smooth and easy process.”

ABOUT

Western Sleep Medicine (WSM) operates multiple clinics across Nebraska, Wyoming, and South Dakota, performing **more than 200 sleep studies** each month.

KEY METRICS

Western Sleep Medicine was able to scale smartly and streamline growth

GROWTH

Enabled HSAT growth without adding staff

RELIABLE

Improvement in HSAT scoring accuracy

ONE

A single platform for all types of studies

CHALLENGES

Rising patient volumes made manual scoring unsustainable. WSM’s technologists were overwhelmed, and turnaround goals became harder to meet. WSM needed an automated solution that could unify in-lab and home workflows without adding staff.

THE SOLUTION

WSM was already using EnsoSleep AI for their PSG scoring and relied on EnsoData for proven accuracy and dependable support. The seamless expansion to EnsoData’s HSAT solution allowed WSM to simplify patient home testing setups, improve overall consistency across the patient population, and reduce troubleshooting time thanks to simpler, easy-to-use devices.

Simple Setup

Improved Consistency

Seamless Expansion

BENEFITS

1

Standardized from PSGs to HSATs

WSM already used EnsoData for PSG scoring, so adding the HSAT solution was a natural fit, bringing everything together, all in one place: faster, easier, and reliable.

2

Unified Platform Improves Efficiency

Utilizing one cloud-based platform for all in-lab and home sleep studies improved throughput, consistency, and operational efficiency while maintaining quality.

3

Simple Device Setup and Fast Turnaround

Patient set up on the mobile app and device is a smooth, easy process, leading to improved turnaround times for both testing and results.
